

LinuxLink for Intel® IXP43X Network Processor

Accelerate your development projects with a LinuxLink software subscription

Welcome to your free evaluation of LinuxLink for Intel® IXP43X Network Processor

With your trial, you will be able to see how LinuxLink can enable your embedded Linux project and cut your time to market by weeks or months.

The amount of information in LinuxLink can be overwhelming. Here are few activities that can help you get the most out of your trial:

Start Your Evaluation

To register for 30 days of free access to LinuxLink for the Intel® IXP43X Network Processor, go to <http://linuxlink.timesys.com/intel-ixp> and use the code **34e8n91a**. After completing the registration form, you will receive an email with login information for accessing your LinuxLink.

Test Linux on your Intel® IXP435 Network Processor board

Get your board up and running quickly by testing it with a reference Linux distribution. Log in to the repository, at <https://linuxlink.timesys.com/repository/view/?id=273>. Here you will find a fully featured reference distribution and a Getting Started Guide for the Intel® IXP43X Multi-Service Residential Gateway Reference Platform LinuxLink which will help you get Linux running on the reference board in no time.

Browse the LinuxLink Repository

To see the hundreds of cross-compiled packages available in the Intel® IXP435 Network Processor LinuxLink, log in to your repository (<https://linuxlink.timesys.com/repository/view/?id=273>) and select the Packages tab. From here, you can see the cross-compiled (both glibc and uClibc) RPM packages available for both host and target machines.

View the Documentation

Visit the LinuxLink Developer Network at <http://lldn.timesys.com> to find hundreds of documents and webinars that cover how to use LinuxLink, as well as a wide range of embedded Linux topics. For additional help, visit our forums at <http://lldn.timesys.com/forum>.

Why Subscribe to LinuxLink?

- **Customize your Linux platform using 100% open source components**
- **Accelerate development and reduce time to market**
- **Improve performance and maintain security with easy access to the latest code**
- **Interact directly with Timesys engineers to get help with your embedded Linux questions**
- **Standardize your development environment with an open platform**
- **Develop using Linux or Windows hosts**

Start Your Subscription Today

Once you are ready to take advantage of a LinuxLink subscription, visit http://www.timesys.com/subscription/linuxlink_overview to learn about our subscription options, or contact sales@timesys.com to receive a quote. With your trial, you will be able to see how LinuxLink can enable your embedded Linux project and cut your time to market by weeks or months.

About Timesys

Timesys is the leading service provider to developers in the embedded Linux market, delivering LinuxLink subscriptions that empower developers to rapidly and efficiently create their own commercial-grade custom Linux platform. The continuously updated cross-compiled components, information and systems offered through LinuxLink subscriptions are aggregated from the open source community, semiconductor manufacturers and Timesys and hosted in the LinuxLink Developer Network.
